Euromillions SuperDraw Prizes and Do We Need Them Now We Have Larger Rollovers

EuroMillions Superdraw

The Superdraws for the Euromillions game were first introduced around three years after the first draw ever took place in 2004, although officially the euro millions can only be played via the 9 countries involved before the introduction of the superdraw this game and its jackpot had already gained the interest of lottery players around the world outside of the member countries "Using Online Lottery Merchants To Gain Access".

These Superdraw games usually would be held Twice A Year and have a jackpot prize of over €100 million.

First Euromillions Superdraw

The first Euromillions Superdraw that we ever witnessed was on February the 9th 2007 and was for over €100 million, this jackpot was won and went to an unnamed player from Belgium, at this time this win was the third largest going to just one individual ticket.

Is There Any Need For Euromillions SuperDraw Today!

If you were to ask me I would have to say the Euromillions is a Super draw even before adding these special event draws twice every year, the world wide interest would also have me suggest this.

My question is what will become of the **Euromillions Superdraw** now we have a Tuesday game which may I add helped in a massive £161 million Jackpot event which ended on the 12th of July 2011 with one ticket claiming this prize amount making lottery history.

Will the new Tuesday game bring an end to the once twice yearly *euromillions superdraws* will they be needed to bring more excitement and an influx of cash to this game, will the euromillions operators design something much more appealing for the new age of lottery lovers. "This is something we will just have to wait and see".

In the mean time take a look at the table displaying some momentous and *historic euromillions wins and winners*.
